

SELECTED ALIGNMENT

The selected alignment, consisting of Alternatives S2b and N3a, was formally evaluated in the Environmental Document finalized in March 2025. This combination of alternatives was determined to be the most favorable based on the following factors:

- Highest level of accessibility
- Least impacts to wetlands
- Avoids conflicts with the Marathon TAPL
- Lowest estimated construction cost
- Most constructible option
- Minimal need for private property acquisition
- Greatest level of public support

This alignment was updated following the March 2025 Open House to reduce Coastal Trail realignment.
